

# Front Suspension Addendum

The full 73TEN Kit utilises the race proven CRC Pro-Strut front suspension. There are a couple of minor changes to the instruction sheet supplied by CRC, which are detailed here.

1. There are new spacers and shims for under the main suspension arms, the plastic ones are not in the kit. Instead a carbon arm spacer (2.5mm) and a set of .5mm, 1.0mm and 2.0mm quick release items are included
2. The plastic steering arms are replaced with small carbon items to meet our required Ackerman settings
3. The ball nut and screw on the steering arm is replaced with a steel ball stud and 3mm lock nut

The image below shows the new parts included and the parts they replace in the CRC instruction sheet.

- 1 replaces number 15
- 2 replaces number 7
- 3, 4 and 5 are used as quick release shims between the arm and front suspension plate
